Printer Control Language (PCL) page formatting

For more information on PCL, see the *Printer Languages and Interfaces Technical Reference*. It contains a complete listing with descriptions of PCL commands.

To determine which PCL commands your printer supports, see “Appendix A: PCL support” on page 23.

Printable areas

The printable areas and logical pages for PCL emulation (both portrait and landscape orientation) are illustrated below. See the legend that follows for definitions of areas **A** through **I**.

Legend:	
A	Portrait physical page width and landscape physical page length
B	Portrait physical page length and landscape physical page width
C	Portrait logical page width
D	Landscape logical page width
E	Distance between the side edge of the physical page and the logical page in portrait
F	Distance between the side edge of the physical page and the logical page in landscape
G	Distance between the top and bottom edge of the physical page and logical page
H	Distance between the left and right edge of the physical page and the printable area in portrait, or distance between the top and bottom edge of the physical page and printable area in landscape
I	Distance between the top and bottom edge of the physical page and the printable area in portrait, or distance between the left and right edge of the physical page and the printable area in landscape

Note: The tables that follow in this chapter list the page sizes and dimensions of each area labeled on the preceding diagram for all paper and envelope sizes your printer supports.

Supported paper and envelope dimensions

The following table lists the page sizes and print area dimensions for all supported paper and envelope sizes. For more information about the printable areas and logical pages for PCL emulation, see “Printable areas” on page 9.

¹ Pel dimensions are for 600 dpi.

² Page Size Parameters are explained in the Page Control table in the PCL chapter of the *Printer Language and Interfaces Technical Reference*.

³ The width of the logical page for A4 paper can be changed from the printer control panel or your application.

⁴ For the Universal paper size, the area dimensions are listed in pel ranges.

⁵ Paper ID 99 will be supported for backward compatibility with other Lexmark printers. Paper ID 99 has the same logical paper size as ID 100 (compatible with HP LaserJet 5Si/5SiMx) but is 8 pels wider than the Lexmark 4039.

⁶ To support two-sided printing, the Universal paper size length must be between 5.83 inches (148 mm) and 17 inches (431.8 mm); and the width must be between 8.27 inches (210 mm) and 11.69 inches (297 mm).

Note: The explanation of the printable area assumes that the Print Area menu item is set to **Normal**. For more information, see “Print Area Menu Item” in the PCL chapter of the *Printer Language and Interfaces Technical Reference*.

Printer Job Language (PJP)

PJP commands information

Your printer supports complete PJP commands, including certain commands that cause the printer to enter PCL emulation, PostScript emulation, and Personal Printer Data Stream (PPDS).

For a complete listing with descriptions of PJP commands, see the *Printer Languages and Interfaces Technical Reference*.

To determine which commands your printer supports, see “Appendix B: PJP support” on page 32.

PostScript (PS) emulation

Your printer supports complete PostScript emulation supplemental operators. For full, detailed descriptions of these operators, see the PostScript emulation chapter of the *Printer Languages and Interfaces Technical Reference*.

To determine which commands your printer supports, see “Appendix C: PostScript support” on page 83.

PostScript paper tray support

When the printer receives one of the operators listed in “Tray selected with tray operators” on page 14, it performs the actions listed in this section. This paper tray selection process ends when a suitable paper source is chosen and paper is fed from this tray.

- The printer checks the value of **manualfeed** in **statusdict** and the ManualFeed page device parameter. If either one is true, then the printer sends a message to load the requested size in the manual feeder or multipurpose feeder.
- The PageSize Policy is set to **0** by means of **setpagedevice**.
- The printer checks the paper size loaded in the current active source to determine if it matches the requested size. If the sizes match, then the paper is fed from the active source.

Note: The current active tray is the last source that was selected from the printer control panel or by the printer language.

- If the requested size and the size loaded in the active source do not match, then the sources are searched in the order defined by the Priority array in the InputAttributes dictionary in the pagedevice dictionary.
- If the requested media size is not found by the previous search, then the following search order is used:
 - Tray 1
 - Tray 2
 - Tray 3
 - Multipurpose feeder
 - Tray 4
 - Tray 5
- If the requested size cannot be located in any automatic source, then a **configurationerror** is issued and the job is flushed.

For printers that support automatic two-sided printing (duplexing):

- Automatic two-sided printing is not supported for custom-size paper or for envelopes in the multipurpose feeder. Automatic two-sided printing is supported from the multipurpose feeder for all other papers.
- If the paper source is changed before the back side of a two-sided page prints, then a blank back page prints, the paper source changes, and the information for the back side of the page is printed on the front side of a page sent from the new paper source.

When these operators are used, it is equivalent to executing the following PostScript emulation sequence:

```
<< /PageSize [x y]/ImagingBBox null /Policies << /PageSize 0>> >>
setpagedevice
```

where **x** **y** are the PageSize in points.

PostScript envelope size support

The literal names in “Envelope sizes supported” on page 15 are also supported as operators in **userdict**. These operators change the image size, but do not change the active paper source. Therefore, when these operators are used, part of the image may be clipped.

When these literal names are used as operators, it is equivalent to executing the following PostScript emulation sequence. The following example uses a 3.875 x 7.5 envelope.

```
<</Policies <</PageSize 7>> /PageSize [279 540]>> >>setpagedevice

PostScript envelope tray support

If **manualfeed** in **statusdict** and the ManualFeed page device parameter are false when the printer receives one of the envelopetray operators listed in “Envelopetray operator selections” on page 17, then the following occurs:

- The printer sets the PageSize Policy to **0**.
- The printer checks the active source to see if it matches the requested envelope size. If the sizes match, then the envelope is fed from the active source.

Note: The active source is the last source selected from the printer control panel or data stream.

- If the requested size and the size loaded in the active source do not match, then the sources are searched in the order defined by the Priority array in the InputAttributes dictionary in the pagedevice dictionary.
- If the requested media size is not found by the previous search, then the following search order is used:
 - Envelope feeder
 - Multipurpose feeder

- If the requested size and type are not available from any automatic source, then you are prompted to load the requested envelope size and type in the manual feed source.
- If the size is still not available, then a **configurationerror** is issued, and the print job is flushed.

If manualfeed or ManualFeed is true, then the printer prompts you to load the requested size manually. If no manual feed exists on the printer, then a **rangecheck** error message is issued.

The envelope tray the printer selects when it receives an **envelopetray** operator is listed in “Envelopetray operator selections” on page 17. These operators are equivalent to executing the following PostScript emulation sequence:

```
<</PageSize [x y] /ImagingBBox null /Policies<</PageSize 0>> >>
setpagedevice
```

where **x** **y** are the PageSize in points.
